Impact-Based Forecasting and Climate Services

21-24 January 2025 | Bangkok, Thailand

Learnings and Experiences on reach and impact of climate and weather services from Anticipatory Action and Climate Smart Programming in South Asia

Ramiz Khan, Red Cross Red Crescent Climate Centre

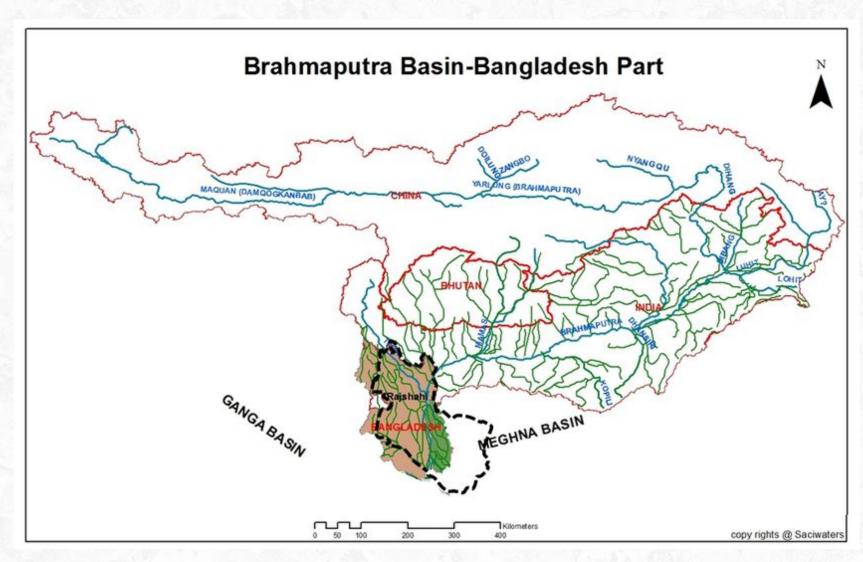

What is Anticipatory Action (AA) or Forecast-based Financing (FbF)?

Forecast-based Financing (FbF) is a programme that enables access to humanitarian funding for early action based on in-depth forecast information and risk analysis.

Anticipatory Action before the flooding in 2020: in the Brahmaputra basin, Bangladesh

- On 24 June 2020, the Global Flood Awareness System (GloFAS) issued a forecast of 50% or more probability of a 1-in-10 year flood which would remain above that threshold for three days.
- The flood was expected to affect 3.7 million people.
- This triggered the forecast-based financing (FbF)
 mechanism of Bangaldesh Red Crescent Society (BDRCS),
 which began to take action as planned in their Early Action
 Protocol for floods.
- BDRCS distributed an unconditional multi-purpose cash grant of 4,500 Bangladeshi Taka (about US\$53) to 3,789 vulnerable households across 10 Unions in the districts of Jamalpur, Gaibandha and Kurigram.

Does the Anticipatory Action make a difference before flood?

- 27% of cash beneficiaries reported that they evacuated adults after receiving an early warning, vs 11% (+16%) of respondents among the comparison group.
- None of the cash beneficiaries had to sell household assets (e.g., beds, furniture, cooking stoves, kitchen items, etc.), whereas 12% of the comparison group had to adopt that strategy to cope with difficult economic conditions after the flood (-12%).
- 44% of beneficiaries said they had to borrow money to cope with the impacts of the flood, vs. 56% of the comparison group (-12%)
- 51% of beneficiaries indicated that some of their working equipment (such as tools, fishing equipment, pumps, etc.) was damaged to some degree or lost, vs. 72% of comparison households (-21%).

Is FbF lower women's vulnerability to flooding in Bangladesh?

The study was conducted in two distinct geographical settings in northern Bangladesh: Charland (river island) and Mainland, without flood embankment protection.)

- It reveals that FbF cash assistance primarily aided rural women in reducing the financial vulnerability of their households. Spending the cash assistance on buying food and boat evacuation directly benefits women and men alike and reduces the need for taking loans.
- No spending was made on women's personal utility and safety needs before, during, and after the flood.
 Charland and Mainland females faced barriers to basic utility and hygiene services, with Charland women faring slightly better.
- Existing rural socio-cultural norms, timing of cash disbursement, and other factors influenced these females' FbF utilization. Despite the immediate nature of their flood-induced concerns about personal well-being, sanitation, healthcare etc., some opted to prioritize saving the money for their family members' future needs.

F. Rahman et al., 2024 (Progress in Disaster Science 24 (2024) 100389)

Learnings

- 'Forecast-based early action' (FbA) is emerging
- Forecasting is limited but has future potential
- The risk of 'acting in vain' is a major perceived barrier to scaling up FbA
- Value for money?
- Institutional incentives and finance are still skewed towards relief.

Dhangadi Resilient Livelihood Recovery:

A Climate-Smart using Locally led Nature-based Solutions project

Approach

1. Capacity Building + Training

1.1 Training of Trainers (ToT) on Nature-based Solutions (NbS) 1.2 Training on Climate-Smart Programming (CSP) and Climate Action Journey 2. Designing and Conducting Climate Risk Assessments

2.1 Gathering Secondary
Data on Climate Change
and Trends to Apply the
CRASP Toolkit
2.2 Adapting EVCA Tools
to Capture Climate
Change Perspectives
2.3 Conducting
Participatory Risk
Assessments with the
Community
2.4 Undertaking an
Ecosystem Assessment

3. Identifying Climate-Smart Nature-based Solutions

3.1 Reviewing and Analysing Primary Risk Assessment Data from Community Pilots 3.2 Developing Climate-Smart Nature-based Solutions 3.3 Consulting Community to Validate Analysis and Confirm Climate-Smart Solutions 3.4 Engaging and Informing Local Government Stakeholders on Climate-Smart Solutions

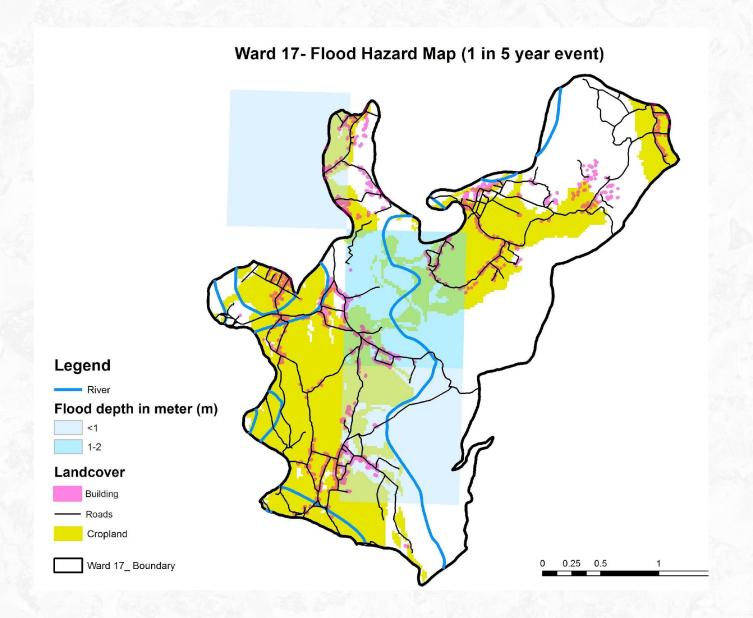

4.
Implementing
Locally Led,
Climate-Smart
Nature-Based
Solutions

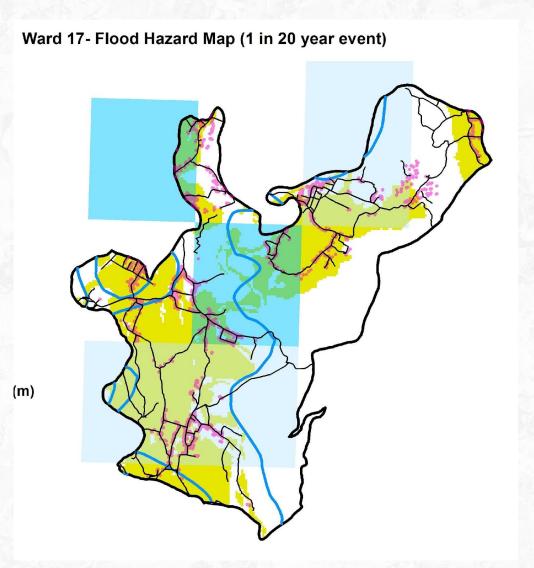

4.1 Community
Engagement Strategy
4.2 Implementation Plan

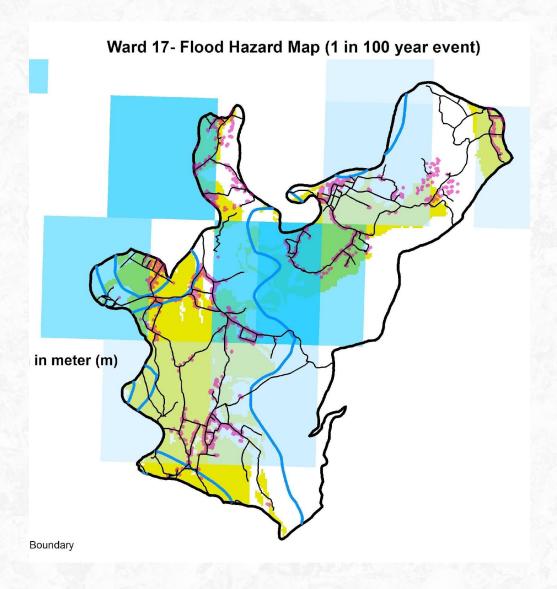

5. Learning, Adjusting and Scaling

5.1 Learnings from the
CSP Process
5.2 Influencing Local and
National Climate and
Disaster Laws, Plans and
Policies
5.3 Monitoring and
Evaluation of Project
Outcomes
5.4 Informing the IFRC's
broader positioning on
Climate-Smart
Programming and
Humanitarian Operations

Climate Risk

Identifying Climate-Smart Nature-Based Solutions

Reviewing and Analysing Primary Risk Assessment Data

Developing Climate-Smart Nature-Based Solutions

Consulting Community to Validate Analysis and Confirm Climate-Smart Solutions

Engaging and Informing Local Government Stakeholders on Climate-Smart Solutions

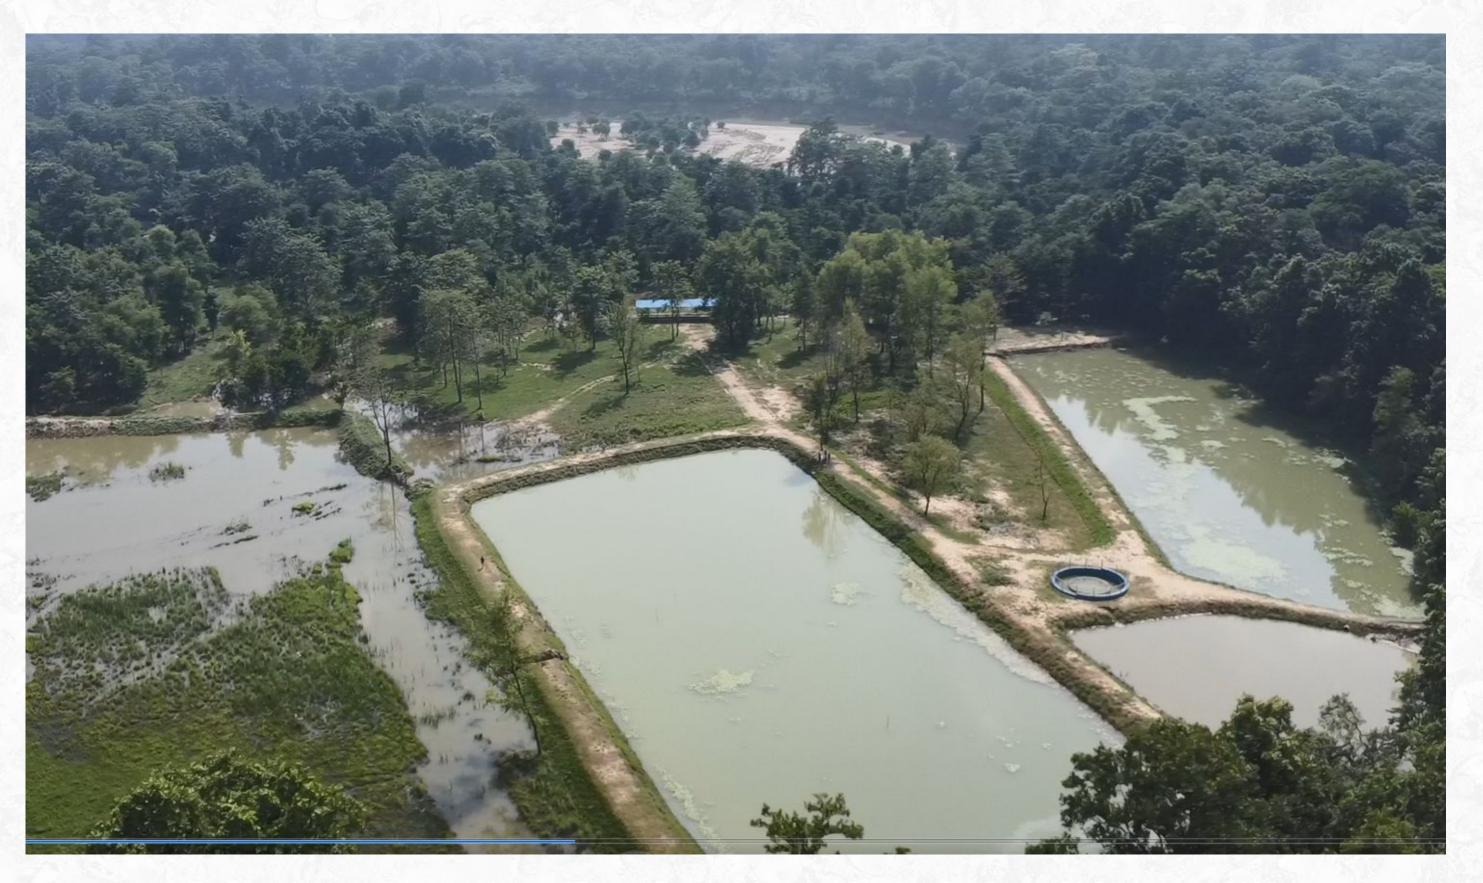

Implementation of Locally Led, Climate-Smart Nature-Based Solutions:

Riverbed Farming

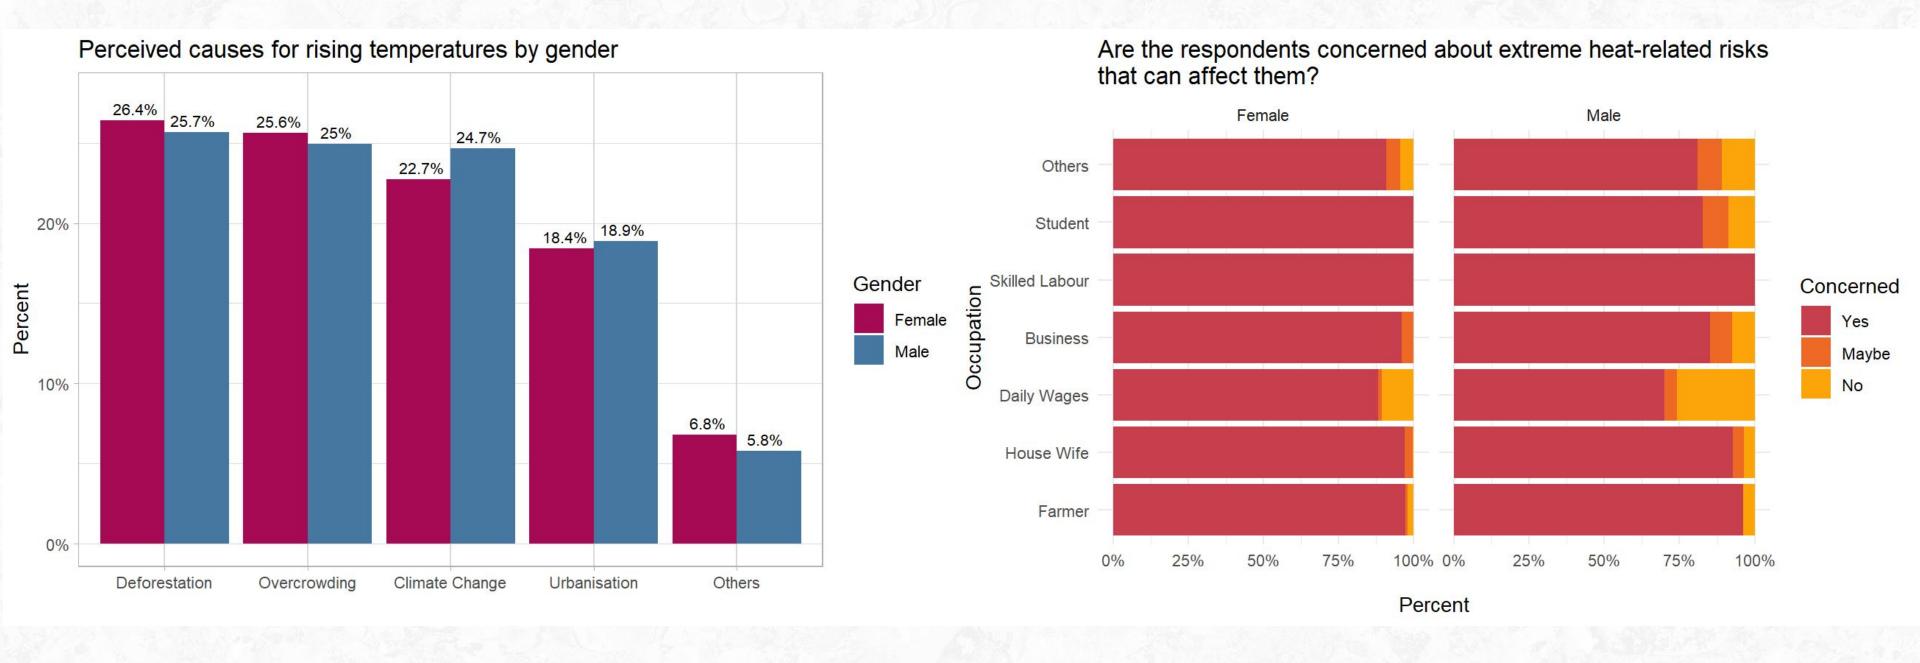

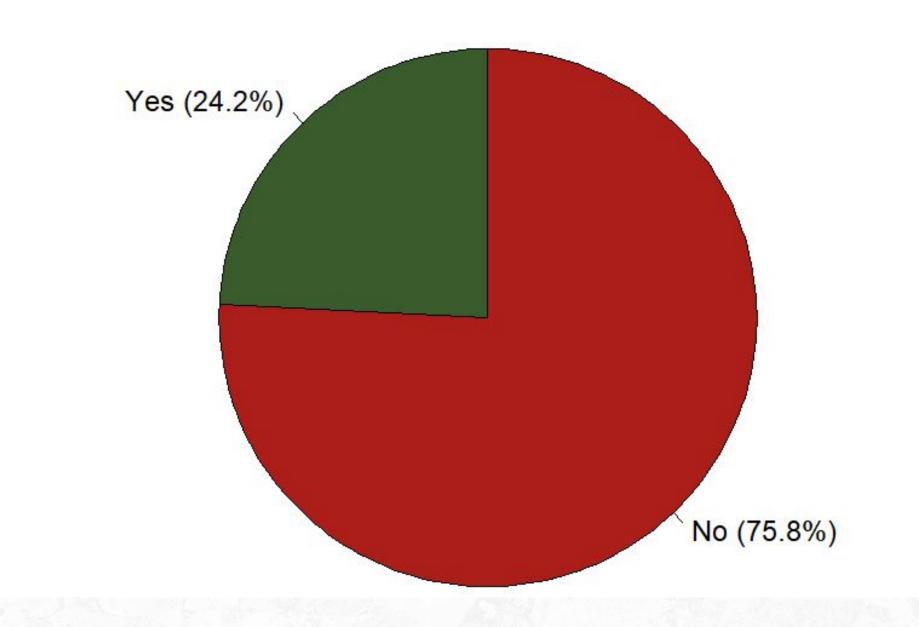

Restoration of the ponds

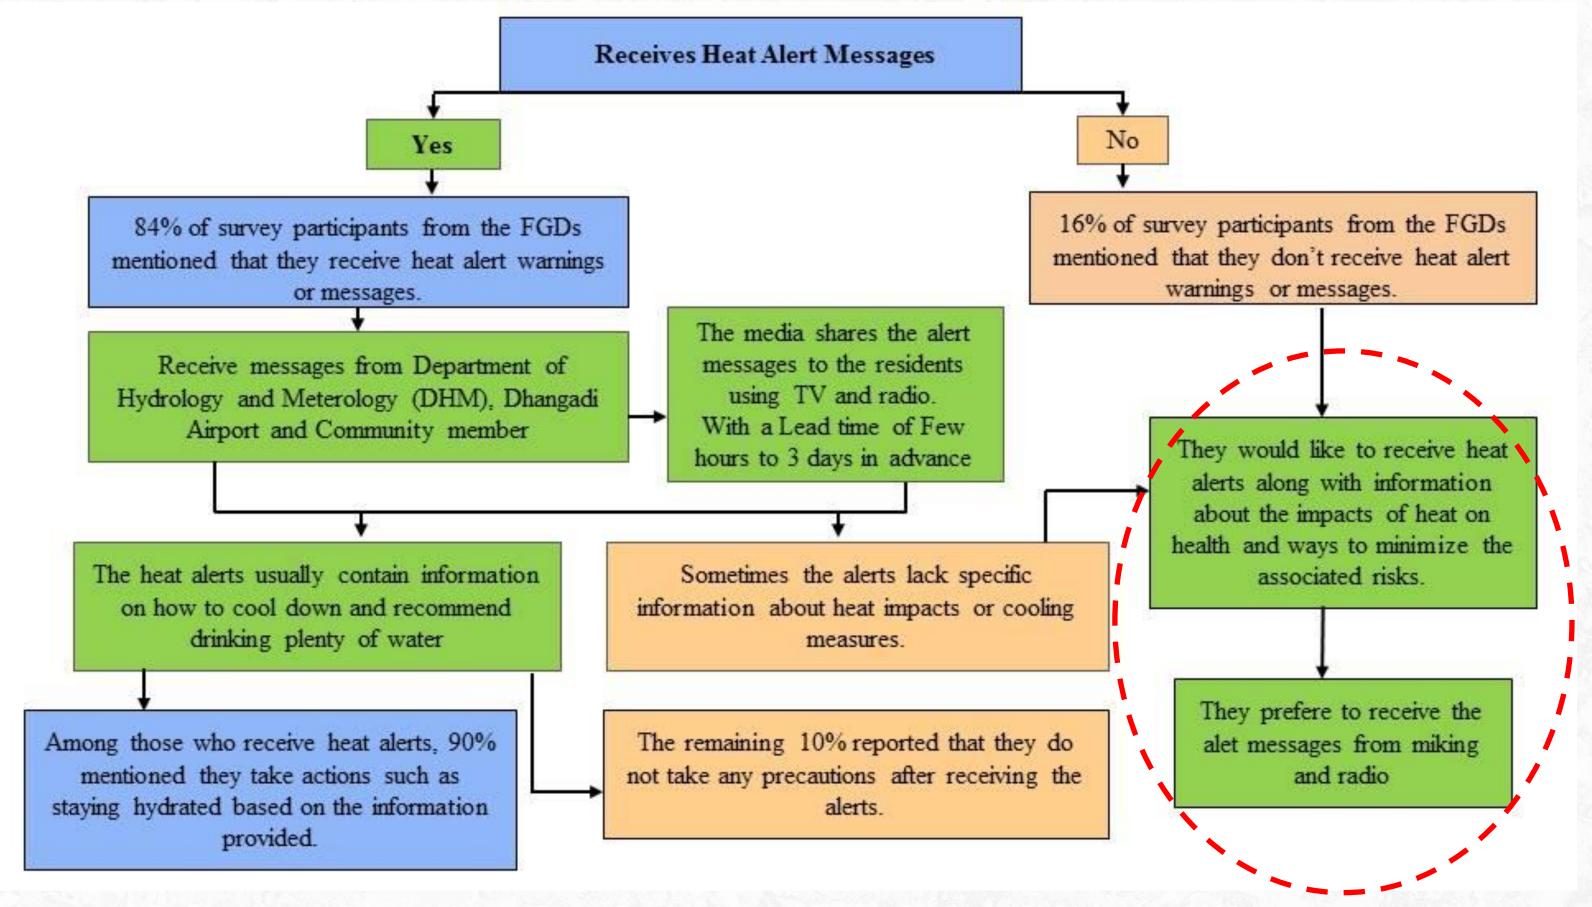

Extreme Heat Risks Perception Study in Dhangadi, Nepal

Do respondents receive alerts or warnings about extreme heat?

Heatwave alert messages

Climate Action Journey

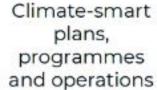

--- Steps for Climate-smart programmes --- and operations

FROM NATIONAL TO LOCAL

National climate risk assessment

Climate-smart screening

Multi-year climate strategy

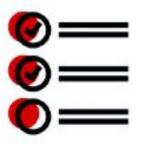

Design of proposals for locally-led adaptation Implementation locally-led adaptation and climate action

Understanding climate change risks and impacts, current and future in the country

Screening all sector programmes and operations to see if/how climate change is included

Planning for integration of climate risk into existing work

Identifying National Society priorities, sectors, partners

Participatory risk assessment processes to ensure we build on indigenous knowledge, local risk perceptions and local solutions.

Developing inclusive and strategic adaptation proposals

Implementing local solutions, based on the full risk-informed process

FROM LOCAL TO NATIONAL

ENABLERS:

Institutional buy-in Resources Awareness Basic principles:

working with climate information across timescales and partnerships

/ Amplifying through influencing: climate and disaster laws, policies and plans at national level

Parallel trajectories:

integrating environmental sustainability and climate change mitigation

CLIMATE RISK MANAGEMENT in all HUMANITARIAN SECTORS

CLIMATE IN HUMANITARIAN PROGRAMMES AND **OPERATIONS**

Disaster management, DRM, & DRR

More frequent and extreme weather-related disasters & increasingly erratic seasons.

Health & care systems

Human health impact of stronger heatwaves, floods, droughts & changing disease patterns.

Water, sanitation & hygiene

Changing water availability: too much or too little.

Livelihoods & food security

Effects of warmer weather and more variable rainfall on food production & businesses.

Shelter, housing & settlements

Emergency operations challenged by increasingly intense & frequent disasters.

Migration & displacement

Increasing displacement & livelihood loss from climate change & disasters.

Climate change adaptation
National Societies/IFRC will increasingly need to engage in dedicated adaptation efforts.

Other National Society activities

Many National Societies have other activities that can also be affected by climate & weather.

EXAMPLES OF CLIMATE RISK MANAGEMENT

Preparedness, response, early warning - early action, & Anticipatory Action programmes.

Scaling up health programmes & strengthening health system resilience.

Enhanced water resource management, innovative WASH interventions & awareness raising.

Livelihood & crop diversification, research & capacity building for long-term sustainable adaptation.

More complex emergency ops & building shelter/housing in safe(r) locations (with new extremes in mind).

Guiding vulnerable people towards safer areas, assistance along routes and when settling, helping create new livelihood opportunities.

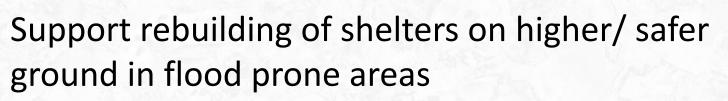

Increasing expertise, making regular orogrammes climate -smart, & investing in additional adaptation projects that reduce the impacts of climate change from the onset.

Cross-cutting work across areas like protection, gender & inclusion, & community engagement & accountability to ensure focus is on those hit hardest by the climate crisis and/or who are at greater risk because of it.

Planning of temporary shelter locations and structures with extreme heat, cold or flood risks in mind

Critical reflections and learnings from AA/IBF implementation

- Number of IBF pilots/services from Met Agency, however the inclusion of humanitarian/AA community in the coproduction process of IBF is still limited.
- A bit of disconnect in the common understanding of AA trigger/threshold (and how IBF product and services can inform this) between NMHS and AA/humanitarian community.
- Multiple triggers and thresholds for AA exists for same given context and hazard in the country lots of confusion requires trigger harmonization process together with NMHS
- There is need of distinction between what it is needed for the public (as IBF warnings) and what is needed for AA/humanitarian community (IBF products and information) to mobilize funds and implement early action, the latter demands more specific and quantifiable information.
- Uptake of seasonal outlook information for humanitarian preparedness is growing; however the process is still ad-hoc, not much streamlined or mainstreamed as that for short-term forecasts the SAHF and NMHS in the region has more to do on this space.
- Lots of demand on climate related information (future climate projections, trends) across humanitarian & DRR community, but this information are not easily available (in the scale needed) and understood well (correct interpretation at user levels), leading to limited uptake for climate smart programming.

Group Work

- **Group 1:** How can IBF and climate services be effectively tailored to address the specific vulnerabilities of marginalized communities in South Asia, including considerations of Gender Equality and Social Inclusion (GESI)?
- Group 2: What innovative tools, metrics, and approaches can be used to measure the real-world impact of IBF and climate services in improving resilience and adaptive capacity in vulnerable communities?
- Group 3: How can we develop evidences and best practices on GESI consideration in IBF and climate services across the SAARC communities?
